
Antarctic paleo hindcasts — alternative forcing, not Wong reproduction
Independent proxy boundary conditions
Prescribed global sea level (m)
Age (kyr before CE2000)
Spratt: youngest value removed
Waelbroeck: adjusted chronology
Waelbroeck: unadjusted chronology
Fixed physical parameters; no fast loss
Antarctic contribution (m)
Age (kyr before CE2000)
Spratt shifted
Spratt unshifted
Waelbroeck adjusted
Waelbroeck unadjusted
W17F constraint
Threshold sensitivity; other parameters fixed
Antarctic contribution at 120 kyr BP (m)
Fast-loss temperature threshold (°C)
5 mm/yr
10 mm/yr
15 mm/yr
W17F LIG window
Initial-radius sensitivity; floor 10−13 m
Absolute SLE difference (m)
Elapsed time after initialization (kyr)
Initial radius × 0.9
Initial radius × 1.1
